SUMMARY

Final year AIML student ('27) who builds AI-integrated products and ships them. Engineered a custom prompt system with structured JSON output, tone profiling, and validation logic for an AI content tool live in production (xcraft.aadarshm.me). Also shipped a Chrome extension on the Web Store (focuszen.aadarshm.me). Comfortable owning the full stack end-to-end — architecture, backend, auth, and deployment. Full portfolio at aadarshm.me.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, C++, SQL

AI & Prompt Engineering: Gemini API, LLM integration, structured JSON output design, prompt chaining, hallucination reduction

Backend & Systems: Node.js, Express.js, REST API design, WebSockets, WebRTC, Socket.io

Frontend: React.js, Next.js, TailwindCSS, Redux Toolkit, Responsive Design

Databases: PostgreSQL, MongoDB, Prisma ORM, Vector Databases

Auth & Security: OAuth 2.0, JWT, secure session management, TLS (coursework)

Tooling: Git, GitHub, Docker, Vite, Webpack, Chrome Extension APIs

EDUCATION

Delhi Technical Campus (GGSIPU)

2023 – 2027

Bachelor of Technology – Artificial Intelligence & Machine Learning

CGPA: 8.065/10.0 | Latest Semester (6th): 8.5/10.0

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Operating Systems, DBMS, Computer Networks, Network & Information Security

PROJECTS

Xc Craft – AI-Powered Post Generator

<https://xcraft.aadarshm.me>

Production full-stack application that generates structured X (Twitter) posts and threads using custom prompt engineering. Live with real users.

- Designed a multi-layer prompt engineering system using Gemini API — structured JSON outputs, fallback error handling, and tone-specific instruction sets across 6 tone profiles and 3 post formats, reducing hallucinations and improving output consistency
- Designed and implemented a REST API backend from scratch using Express.js and PostgreSQL, handling real user sessions in production
- Built end-to-end OAuth 2.0 and local authentication system with secure session management
- Integrated Twitter API for direct post publishing, independently learning third-party documentation to implement the full integration
- Migrated backend from a BaaS (Appwrite) to a custom Express + Postgres architecture for full ownership of the data layer
- **Technologies:** React, TypeScript, Express.js, PostgreSQL, Prisma ORM, OAuth 2.0, Gemini API, Prompt Engineering

FocusZen – Productivity Extension + Web App

<https://focuszen.aadarshm.me>

Full-stack system consisting of a Chrome browser extension (published on the Chrome Web Store) and a companion React web dashboard for focus session tracking.

- Learned Chrome Extension APIs independently from scratch and shipped a published extension managing site-blocking rules and real-time focus sessions
- Built a companion REST API backend with PostgreSQL for persistent session tracking and user data storage
- Owned the full pipeline independently – from local development through Chrome Web Store deployment and production maintenance
- **Technologies:** React, TypeScript, TailwindCSS, Chrome Extensions API, PostgreSQL, Prisma ORM, Gemini API
